Systematic reviews are a type of literature review that uses systematic methods to collect data, critically appraise research studies, and synthesize results. These documents are not to be considered guidelines or guidance documents. CDC requests input from HICPAC on a variety of topics. In response, HICPAC can form workgroups to develop input for the committee to consider. Final HICPAC products are presented and voted on at HICPAC meetings. Guidance documents written by the HICPAC for use and distribution by CDC. The CDC infection control guidelines that were developed with input from HICPAC have moved to the infection control website. This systematic review is designed to evaluate the available evidence on *C. difficile* in the NICU. The results of this review highlight the paucity of evidence on this topic and the persistent uncertainties in the epidemiology of *C. difficile* in this vulnerable population. This systematic review is designed to evaluate the available evidence on prophylaxis and screening to prevent transmission of viral respiratory illness in the NICU. The results of this review highlight the paucity of evidence on this topic and the persistent uncertainties in the epidemiology of viral respiratory illnesses in this vulnerable population. How to incorporate stewardship in treatment guidelines. Healthcare facilities should have a reliable, high-quality system for endoscope reprocessing which minimizes infection risks. To achieve this goal, all reprocessing programs must have an infrastructure that supports training and competencies, quality measurement, and management. The following guidance is provided to assist healthcare facilities, including clinical and administrative staff, to achieve a reliable, high-quality

reprocessing program. Healthcare facilities can use sample documents to incorporate the Essential Elements of Flexible Endoscope Reprocessing into their reprocessing program. These tools can be modified to meet your facility's specific needs. Recommended standards for the use of HAI surveillance data for external facility assessment to ensure valid comparisons of data between facilities. Guidelines for public health and HAI reporting systems based on established principles. This document is intended to assist with the design and implementation of public HAI reporting systems. HICPAC provides infection control, surveillance, prevention and healthcare-associated infection (HAI) guidance and advice. Languages Language Assistance Languages Language Assistance
